## FACULTY.

---

A. E. SMALL, M. D.,

Professor of the Theory and Practice of Medicine.

R. LUDLAM, M. D.,

Professor of the Medical and Surgical Diseases of Women, Obstetrics and Clinical Midwifery.

TEMPLE S. HOYNE, M. D.,

Professor of Materia Medica and Therapeutics, and Clinical Lecturer on Venereal and Skin Diseases.

GEO. E. HALL, M. D.,

Professor of the Principles and Practice of Surgery and Clinical Surgery.

HARLAN P. COLE, M. D.,

Professor of General and Surgical Anatomy and Minor Surgery.

W. J. HAWKES, M. D.,

Professor of Physiology and Clinical Medicine.

C. H. VILAS, M. D.,

Professor of Diseases of the Eye and Ear.

C. GILBERT WHEELER, M. D.,

Professor of Chemistry and Toxicology.

---

## AUXILIARY CORPS.

---

S. LEAVITT, M. D.,

Adjunct Professor of Obstetrics.

H. B. FELLOWS, M. D.,

Professor of the Physiology and Pathology of the Nervous System.

C. E. LANING, M. D.,

Adjunct Professor of Physiology and Demonstrator of Anatomy.

## NINETEENTH

# VALEDICTORY ADDRESS.

---

LADIES AND GENTLEMEN:

History teaches us that in the earlier ages, man required physical evidence of the operation of forces, before he could or would believe in their existence. It is only when communities become highly civilized that they recognize and study the unseen forces of nature.

In the formation of society, wealth, which can only be acquired by industry and frugality, must be accumulated before knowledge, the corner-stone, and in fact the whole foundation of civilization, can be secured. Before wealth is amassed, the people being engaged in obtaining a subsistence, have no leisure, and leisure is absolutely necessary for the advancement of knowledge, which is the progress of individuals and hence of society. With civilization and knowledge comes the power to fully appreciate the unseen forces of nature. The great foes to advancing civilization were ignorance and superstition. Ignorance shrouded the minds of the ancients with a thick veil, which excluded for a long period the great moral and intellectual truths which learning has brought to light.

Youth is always more superstitious than mature age—be it the youth of a nation or of an individual. This is undoubtedly owing to the undeveloped state of the mind. When any remarkable phenomenon occurs, the cause of which is not at once apparent, or which is inexplicable to the masses of the people, it is made an object of superstition. The ancients knew nothing of the nature of thunder and lightning, and hence their superstition concerning it. The Greeks and Romans considered lightning as the thunderbolt hurled by Jove, in his wrath, to the earth; and in the Old Testament thunder is spoken of as the voice of the Lord. In our day many

phenomena, formerly considered wonderful, are stripped of their imaginary terrors, by the knowledge of scientific truths which is possessed by every school boy.

" Must helpless man, in ignorance sedate  
Roll darkling down the torrent of his fate?"

Even religion, in the early ages of the world, was obliged to resort to forms and images, in order to convey to the mind an idea or just conception of its truths. So it is with the child or the untutored savage, we must still instruct them by means of the eye or other special senses. It is only after the mind becomes somewhat educated that it can understand abstract truths. In the early forms of government it was not scientific ideas that controlled, but mere physical force. There was no other governing principle. Now, however, principles of right and justice are the main factors in all civilized countries.

Up to the time of Hippocrates, 458 years before Christ, the practice of medicine was mostly in the hands of midwives and ignorant persons, who possessed but little or no information on the subject. But from that time on, many advances were made, although many of Hippocrates' erroneous views prevailed for a period of two thousand years. The uneducated practitioner of medicine had full sway until about the end of the fifteenth century, the time printing was discovered.

In those days medicine and religion went hand in hand. The priest in the monastery joined to the study of the sacred writings of the day, a reading of all the medical treatises as they appeared, and frequently acted as physician both to the mind and body. There is no time, perhaps, when religious instruction makes such an impression upon the mind, as when the penitent is prostrated with some form of acute illness. It is then that he heeds wise counsels, and bravely resolves to do better in the future, should his life be spared. Religion resorted to forms and images, medicine to the most nauseous and repulsive substances.

In the early history of medicine we find that the crudest of substances only were employed as remedies, because the people, totally uncivilized, required drugs that not only could be seen but the effects of which could be immediately felt. Even in Jenner's day the beneficial effects of vaccination were denied, for a time, because the results were not immediately seen.

Thus it was also with Hahnemann's law of cure. Although Hippocrates and others had performed cures in accordance with it, centuries before Hahnemann's time, they did not consider it of much importance, or the world had not become learned enough to accept a doctrine, so at variance with their preconceived ideas of the action of medicines. It was reserved for the Father of Homœopathy to demonstrate, not only the existence of this law but its universal applicability. From the time of the announcement of the discovery, up to the time of his death, Hahnemann hardly experienced a peaceful hour. He was persecuted on all sides; but persecution, as is ever the case, only served to strengthen the cause of the persecuted. He was forced to move from place to place, but his adherents became more and more numerous, until he was well able to effectually battle with his opposers. The contest still continues, with the probability of a grand victory at its termination, in favor of the universal acceptance of this law of cure.

Homœopathy is based on scientific principles capable of actual demonstration, but the untutored savage and the prejudiced observer will not yet admit its truths. The system is still in its infancy, but shows a healthy growth. Like all scientific truths, which in their incipency have had to stand the storms of violent and prejudiced opposition, it has bravely buffeted them and has fought its way into general favor, which is one of the best evidences of its truth.

Its effects, however, have not been confined to our school of practice, but it has greatly improved and modified other existing systems of medicine, in the adoption by them of many of its mild and simple remedies, and the discontinuance of the former heroic and bloody treatment. For this alone humanity should be grateful to Hahnemann, if for no other reason. We must not overlook, however, the greater intelligence of the people of this century, which made such a radical change in medical treatment possible.

Some very wise prophets have lately predicted the speedy downfall of Homœopathy; these predictions have been made from time to time during the last fifty years by very prominent physicians, but they have proved themselves false prophets. Our house is built upon the rock of truth, and not upon the shifting sands of error.

In order to correctly estimate the rapid growth of our system of medicine, it is only necessary to refer to the Homœopathic Colleges of this country. Six years ago the number of students attending these institutions was about five hundred. The present winter there

are nearly *twelve hundred*. Your alma mater three years ago had but ninety matriculants, the present winter session she has about one hundred and ninety, an increase of over one hundred per cent.; an increase which *places her at the head of the list*. Candidly, does not this look very much as if Homœopathy was dying out?

A certain town in Iowa, eight years ago, supported ten regular physicians and one Homœopath, or irregular. To-day it supports five irregulars and barely sustains four regulars. You will doubtless observe that the number of physicians has diminished by two, and yet the town is a growing one and very much larger now than at that time, a proof positive that not only are the people intelligent, but an evidence also of the fact frequently stated, that as a community adopts Homœopathic practice, the amount of illness necessarily diminishes. The patron of Homœopathy is not as liable to frequent attacks of sickness as the patron of other schools, who is a walking medicine chest, a sort of receptacle for all kinds of compounds, new and old.

Another fact may be mentioned as evidence that we are not on the decline, or retrograding as rapidly as the prophets would have us believe, and that is the constantly increasing number of regular physicians, who come to us every winter to learn something about this mysterious system of cure, which even in the hands of an educated layman, seems to relieve cases which have baffled the skill of the most talented anti-Homœopath.

The present century has developed more great minds in the inventive line than any other, and the honor of these inventions belongs principally to the Americans, who have always proved themselves not less, if not more, intelligent than any other nation on the face of the globe. Robert Fulton, the inventor of the steamboat, Oliver Evans, the first to apply steam to carriages, Prof. Morse of telegraphic fame, and later, Edison, Gray, and others, have all added materially, not only to the wealth and learning of the country but to its comfort. We cannot claim to have discovered Homœopathy, but we can claim with justice that it is here in the most civilized country in the world—here among the most energetic and talented men—that it makes its most rapid progress.

You have this evening received the highest gift we can bestow, the degree of doctor of medicine and surgery, an honor which you have nobly labored for and justly merited. From a personal acquaintance with each member of the class I have no fear that you

will disgrace your alma mater. Many of you have burned the midnight oil in your earnest search for knowledge, and remember that the lamp must still burn if you would keep pace with the rapid advancement of science. Bear in mind that during your college days you have simply laid the foundation of a medical education. To rear the superstructure will require years of hard labor. Chemistry, which has been one of your studies, requires, according to the best authorities, fourteen years hard work to thoroughly master. So it is with other branches or divisions of medicine; and whichever department you choose as your special field of labor will require all of your time for the next ten or twelve years, and even then you will not be perfect.

No one correctly estimates the knowledge he does not possess, and he who knows absolutely nothing of the science of medicine, usually considers it an acquirement easily and quickly picked up by any one of ordinary ability. Nearly every old woman considers herself a natural born physician, and not one has any hesitancy in prescribing for any case, no matter how serious, which may chance to fall in her way. And such persons cannot possibly appreciate the wide difference between an educated physician, who thoroughly understands his business and the mere pretender. Compared with medicine law and theology are sciences for children. In no other profession is the counsellor required to give an immediate opinion, without recourse to authorities, and in no other is he held to as strict an accountability. The graduate of a well regulated medical college may not be a good physician; the man who does not hold a diploma can not be, for medicine is not a science that can be self-taught.

You go forth as Homœopathic physicians and surgeons, and at this time will not meet with the bitter opposition and sneers that so many of your predecessors have. There is a gentleman on this platform to-night, who, not very many years ago, was the only Homœopathic physician west of Lake Michigan. His was a hard fight, but he bravely bore it, and as the result of this contest we now find about two thousand physicians of our faith practicing in this same region. Quite an increase in less than forty years.

Your prospects are unusually bright at this time, when many of the smaller towns and villages of the west are loudly calling for Homœopathic physicians to come and settle in them. And we must not forget the south, where the mild dose achieved so much during the yellow fever epidemic. You will be received in many of these

southern cities and towns with open arms, for the people, bearing in mind the comparative success of the new school, have finally opened their eyes to the truth, and no longer require medicine in bulk as curative measures.

It is customary on occasions like the present, to offer a few words of advice, to those who are about to leave us for their future fields of labor—advice which is frequently no sooner heard than it is forgotten. You to-day sever your connection with us as students, and enter the portals of professional life. Your earnest desire, doubtless, is to attain success. If you have no real love for your profession; if you are not actuated by the highest motives; if you have chosen medicine simply as a means of money making, you have mistaken your calling, and will make a miserable failure. You should show this liking for your profession by enthusiasm and promptness in being ready to respond to all calls, whether for public service or private individuals. What we love to do, whether good or evil, influences our every action. But I am satisfied, from the earnest manner in which you have applied yourselves to your studies, by your patience in overcoming all the difficulties in your path, by your uniformly gentle manner to the suffering poor brought before you in the clinics, that you are actuated by the right spirit.

It is stated that success is attained by about five hundred out of every thousand medical students. How shall you secure it? By paying attention to the habits and customs of those about you, so that you may copy the good and avoid the evil. It is the "little drops of water that make the mighty ocean," and it is the attention paid to the little points of etiquette, combined with knowledge, that makes the successful physician. Dignified manners with scientific attainments will secure even the respect of your enemies. Unfortunately the world looks at and judges the man as he appears, notwithstanding the good book says, "Judge not according to appearance."

"Costly thy habit as thy purse can buy,  
But not express'd in fancy; rich not gaudy;  
For the apparel oft proclaims the man."

Slovenliness is inexcusable in one who is brought to the bedside of the sick, for patients are always more or less irritable and disposed to find fault with but little cause, and you should not in any way add to their ill-humor. Untidiness, a careless word, an innocent jest, frequently give rise to feelings of repugnance. Neatness of person and surroundings is an essential both at home and in contact with society.

During your college life you have acquired habits of industry. Do not now, that you have finished your course, cast aside these habits. Improve each shining hour, be diligent and do not waste the precious hours in idleness and immoral society. The lounger about the saloon or other public places, soon loses the confidence of the community in which he lives, and failure is the inevitable result. You are all familiar with the couplet about the devil and idle hands.

Be prompt; nothing so characterizes the man who has little to do as the habit of being invariably behind time. Although the intention frequently is to convey the idea that one is greatly driven with work, it deceives but few, and the really busy man knows better; he thoroughly understands the real value of time, and would not be guilty of the crime of robbing his fellow men of what cannot be replaced. Stolen money can be restored, stolen time never.

Do not procrastinate—the duties of to-day should be completed to-day. To-morrow never comes. Be charitable to all, and especially to the poor and the outcasts of society, who are often truly grateful for the slight favors bestowed upon them. "All mankind's concern is charity," and especially the physician's. He it is who is constantly contributing his mite, constantly relieving some sufferer, constantly making some weary one happy, and 'in the end this charity will cover a multitude of sins.

Be courteous to all. A word, a kind action, a smile, cost nothing, and are like "bread cast upon the waters," and may, in the near future, help "worth, by poverty depressed," to rise. Avoid selfishness, it is generally the mark of a low bred person, one who has had but little to do with his fellow men, and frequently goes hand in hand with envy and jealousy.

Be contented and hopeful. Contentment brings happiness, which is, after all, the great desire of the human race. You will see many dark days, but if you are buoyed up by hope, and strive to win the respect of the community, you will assuredly succeed.

"Care to our coffin adds a nail, no doubt,  
And every grin, so merry, draws one out."

Whereas a certain amount of assurance and self-esteem are a necessity, they should never be allowed to reach the point of conceit. The very noisy man in the community—the one who writes letters to the newspapers on every subject under the sun—the one who is

constantly being mentioned in one way and another, is usually a very hollow vessel, and contains at most nothing but air.

Be true to your name—physician. The ability to relieve suffering humanity, and to prevent disease, has, in every age of the world, been regarded as an attribute almost godlike. Do all in your power to instruct the people how to avoid disease, and when sick, labor to the best of your ability for their relief and recovery. Homœopathy has fallen into disrepute only where incompetent persons have attempted to practice it, or when the palliatives and sudorifics of old physic have been combined with it. See to it that it is popular in your neighborhood. Let your motto, and your only motto, be—

NEVER SACRIFICE PRINCIPLE FOR GOLD.

# THE ANNUAL REPORT.

BY R. LUDLAM, M. D., DEAN OF THE FACULTY.

---

MR. PRESIDENT :

In offering the nineteenth Annual Report of the Hahnemann Medical College and Hospital, of Chicago, it affords me great pleasure to submit the following facts: The College year has been, in all respects, a very prosperous one. The teachers have been united, harmonious, punctual and faithful; the pupils earnest, hearty, diligent and appreciative. The policy of our Board of Trustees not to promise such advantages as we could not really afford has been literally fulfilled. Without exception every lecture engagement has been kept; and not a day has passed without its *Clinic*. The courses of instruction given have been much more practical and thorough than ever before, and with the improved advantages offered, our pupils have reached a higher grade of attainment.

As a College our financial condition is sound; and the Hospital management has recently paid a large share of the mortgage on its property, and renewed its obligations with the same parties, without change of security, and at a reduced rate of interest. The interest on its paper is paid for a year to come, and the institution does not owe a dollar.

The last Spring Term, which, as always before, was a non-graduating one, was attended by 60 students. The design of this Course in giving the pupils the benefit of the didactic lectures, examinations and a clinical drill, was thoroughly carried out. It has been decided to repeat it this year.

The number of students in actual attendance during the Winter Term just closed was 197, of which 162 were men and 35 were women. This shows that within the last three years there has been an increase of more than one hundred per cent. in the size of the class. Not the least gratifying feature of this remarkable growth is

the increased proportion of Eastern students who have come hither for instruction. All of the New England and of the Middle States were represented in the list of matriculants for 1878-79.

Of those who presented themselves as candidates for graduation, 65 have been found worthy, and by the unanimous vote of my excellent and faithful colleagues in the Faculty, they are herewith recommended for the degree which you, Sir, with all of your experience, have never bestowed upon a better Class.

## PRESIDENT'S ADDRESS.

BY A. E. SMALL, M. A., M. D.

---

FRIENDS, LADIES AND GENTLEMEN:

We are assembled this evening to witness the termination of the nineteenth annual course of instruction in Hahnemann Medical College and Hospital, of Chicago, and for celebrating the anniversary "Commencement" of a new era in the lives of some of the students, who have passed through an honorable pupilage, and shown themselves worthy of introduction into the profession of medicine and surgery.

The occasion is one in which society and the public in general must feel the deepest interest. After many months and years of hard study, both in and out of the lecture room, they have attained an eminence in learning that cannot fail of receiving your sanction and respect. To gain this distinction they have consumed much midnight oil, while some indeed have outwatched the Pleiades, and often seen the grey dawn come to extinguish the pale flicker of their waning lamps. They have thus made themselves familiar with the details of ancient and modern medical science, even to the latest discoveries and improvements that adorn the skill of the profession, and after a careful and rigid examination their teachers have pronounced them worthy candidates for the doctorate, and take great delight in commending them to the favorable consideration of all intelligent communities.

The degree about to be conferred attests them truly as learned in medicine; that is, learned to that point which will enable them safely and profitably to practice the art of the physician.

They leave their *alma mater* to find homes in the heart of society, and we trust they will both merit and receive the fostering care and

kindness of troops of sympathizing friends, who will open avenues and surround them with opportunities for the highest religious and social culture.

#### CANDIDATES FOR GRADUATION:

You are now approaching a crisis in your existence. The first great probationary period has been accomplished, and you are about to pass, by a single step, from youth to manhood, and from the pleasures of professional studies to the labors and responsibilities of professional life. We listened with great pleasure to the report of the Dean, and we congratulate you for your successful examination and grade of scholarship. We rejoice that your clinical advantages have made you so familiar with sickness, misery and distress that you can enter the apartments of the sick without embarrassment, to make a ready administration for relief. But your studies are not finished. If faithful to your calling, they are little more than commenced, and will terminate only with your lives. That distinguished patriot and reputed father of American medicine once heard one of his pupils boasting what he would do when he had completed his studies. "My young friend," was the gentle admonition, "I have been studying these fifty years and have not yet seen any prospect of completing mine." You have been studying for a personal object, and now you must study for the benefit of others. You will study to relieve suffering humanity found in all classes of society. You will study to enoble your calling by a correct code of ethics, and by sustaining a common brotherhood in the profession.

# LIST OF MATRICULANTS.

Session of 1878-79.

NAME.	RESIDENCE.	PRECEPTOR.
ABELL, E. J.....	Illinois, .....	Dr. S. E. Trott.
ACHENBACK, JNO. G.....	Wisconsin, .....	Practitioner.
AHMANSON, JNO.....	Nebraska, .....	Practitioner.
ALLEN, W. A.....	Minnesota, .....	Practitioner.
ALLEN, L. E.....	Illinois, .....	Dr. Thos. Eckles.
ALLEN, SARAH J.....	Illinois, .....	Dr. R. T. Speakman.
ANDRUS, A. P.....	Illinois, .....	Dr. W. H. Burt.
ASPINWALL, M. H.....	Illinois, .....	Prof. Hoyne.
ATWATER, JNO.....	Illinois, .....	Dr. Roberts.
BAILEY, GEO. L.....	Michigan, .....	Dr. T. W. Robertson.
BAKER, M. Y.....	Iowa, .....	Dr. M. G. Waggoner,
BARKER, W. A.....	Illinois, .....	Prof. Ludlam.
BARKER, CLARENCE F.....	Maine, .....	Dr. H. B. Eaton.
BARRETT, J. W.....	Wyoming, .....	Drs. Bowman and Gorham.
BATTEY, G. S.....	Illinois, .....	Chicago Med. Coll.
BEEBE, ELLEN O.....	Wisconsin, .....	Faculty.
BOULTER, H. H.....	Illinois, .....	Dr. S. E. Boulter.
BRADLEY, E. W.....	Wisconsin, .....	Dr. H. L. Bradley.
BRADLEY, L. H.....	Wisconsin, .....	Dr. H. L. Bradley.
BRIGGS, W. S., B. S.....	Wisconsin, .....	Faculty.
BROOKS, S. A.....	New York, .....	Dr. F. W. Adriance.
BURG, W. F.....	Iowa, .....	Dr. G. H. Patchen.
BUTLER, A. S.....	Illinois, .....	Faculty.
